

## Pressure Sensors

Low-cost, Stainless Steel, Isolated Sensors

*13 mm Series*

### FEATURES

- Rugged, isolated stainless steel package
- Reliable semiconductor technology
- Calibrated and temperature compensated
- Voltage or current supply options
- Absolute and sealed gage pressures
- Low-cost cell package
- Absolute pressure
- 0 psi to 500 psi, 1000 psi, 2000 psi, 3000 psi, and 5000 psi

### TYPICAL APPLICATIONS

- Industrial controls
- Hydraulic controls
- Tank pressure
- Pressure transmitters
- Process control systems

Honeywell's 13 mm Series stainless steel pressure sensors are designed for high pressure applications that involve measurement of hostile media in harsh environments. This series uses Honeywell's proven piezoresistive semiconductor sensor chip in an oil-isolated housing with or without an integral ceramic for temperature compensation and calibration. This design has proven to be highly reliable, stable and accurate.

These sensors feature a weld-ring collar and special back support ring for high cycle life capability as they are designed for further package integration in OEM (Original Equipment Manufacturer) applications. Products are available with pressure ranges from 500 psi through 5000 psi and can be used with voltage or current supplies.

## PRESSURE SENSOR CHARACTERISTICS (all devices)

Environmental specifications	
Compensated temperature range	0 °C to 82 °C [32 °F to 180 °F]
Operating temperature range	-40 °C to 125 °C [-40 °F to 257 °F]
Storage temperature range	-40 °C to 125 °C [-40 °F to 257 °F]
Vibration	10 G at 20 Hz to 2000 Hz
Shock	100 G for 11 ms
Life	1 million cycles min.
Insulation resistance	100 mΩ at 50 Vdc
Maximum ratings	
Voltage version "K"	Supply voltage $V_s = +15$ Vdc
Voltage version "L"	Supply current $I_s = +2.0$ mA

### NOTES

- Reference conditions (unless otherwise noted):  $T_A = 25$  °C [77 °F]; Supply  $V_s = 10$  Vdc ±0.01 Vdc or  $I_s = 1.5$  mA ±0.0015 mA.
- Full-scale span (FSS) is the algebraic difference between the output voltage at full-scale pressure and the output at zero pressure. FSS is ratiometric to supply voltage.
- Pressure non-linearity is based on best-fit straight line from zero to the full-scale pressure. Pressure hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure.
- Maximum error band of the offset voltage or span over the compensated temperature range, relative to the 25 °C [77 °F] reading.
- Long-term stability over a six-month period.
- Response time for a 0 psi to FSS pressure step change, 10 % to 90 % rise time.
- The maximum pressure that can be applied without changing the transducer's performance or accuracy.
- The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer case.
- Common mode voltage as measure from output to ground.

### NOTES

- Reference conditions (unless otherwise noted):  $T_A = 25\text{ °C}$  [77 °F]; Supply  $V_s = 10\text{ Vdc} \pm 0.01\text{ Vdc}$  or  $I_s = 1.5\text{ mA} \pm 0.0015\text{ mA}$ .
- Full-scale span (FSS) is the algebraic difference between the output voltage at full-scale pressure and the output at zero pressure. FSS is ratiometric to supply voltage.
- Pressure non-linearity is based on best-fit straight line from zero to the full-scale pressure. Pressure hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure.
- The error band resulting from maximum deviation of a transducer's output parameter (offset, span, or resistance) as temperature is varied from 25 °C [77 °F] to any other temperature within the specified range 0 °C to 82 °C [32 °F to 180 °F]. This parameter is not 100 % tested and is guaranteed by process design and tested on a sample basis only. Temperature coefficient of span is evaluated using a constant current source.
- Long-term stability over a six-month period.
- Response time for a 0 psi to FSS pressure step change, 10 % to 90 % rise time.
- The maximum pressure that can be applied without changing the transducer's performance or accuracy.
- The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer case.
